Server Side Developer (CDR, Beer Sheva):

CDR (Cloud Disaster Recovery) is a group in Dell-EMC that responsible to implement
 a solution for backup & recovery in case of datacenter disaster in both private &
public clouds.
The group R&D is located in Herzelia and Beer-Sheva. We are looking for Client or Server Side or preferably both (full stack) Java
Developer.
Enthusiasm, Creativity and a continuous desire for new challenges are qualities we are looking for.
Team work and the ability to work independently are essential for our success.
If you love to use and learn new technologies then your place is with our growing team.

Skills and requirements:

At least 2 years of experience as Java developer.

Also welcome:

Extensive experience with Java server side technologies
Proven abilities to develop large scale, multi-threaded products
Experience developing RESTful APIs and integrations projects with different products
Experience with spring
Results driven, with good execution skills

It's even better if you:

Familiar with the public clouds (AWS/Azure) technologies and APIs
Experience with Agile development, including continuous Integration, continuous Deployment and coding for automated testing
Experience with web development – HTML, JavaScript and CSS
Passion for technology
Contributed to any open source project
Have a cool DIY project to show off
