The French-Israeli High Council for Scientific and Technological cooperation (HCST) has chosen **“Computational modeling with functional and evolutionary genomics of infectious diseases”** as a priority research topic for 2018-2019.

Hence, the French Embassy in Israel and the Israeli Ministry of Science, Technology and Space are offering a symposium on this topic which will bring together renowned French and Israeli scientific experts and open the way for excellence-based cooperations.

The symposium will be held in Tel-Aviv University on the 27th April 2017, and a detailed program will be sent soon.

The symposium will also launch a bilateral Call for Proposals within which three joint research projects in the field of "Computational modeling with functional and evolutionary genomics of infectious diseases" will benefit from a financial support of up to 40.000€ yearly over a period of two years for each side.

Save the date !
