

Team Leader, Wix Bookings

About us

Wix Bookings is the fastest growing sector within the Wix group. Launched just one year ago at our Beer Sheva site, we provide a powerful business and schedule management platform. You'll get in on the ground floor, joining forces with our passionate and talented team to develop this exciting needle-moving product.

At Wix, R&D leaders set the tone and standard of our developer-centric culture. They are also mentors of engineers, helping them better themselves - both in terms of technical and human skills - through pair-programming, coaching and mentorship. While a developer produces software, the team leader's job is to produce a team and ensure high quality delivery that meets our engineering best practices.

The Wix development culture is transparent, highly technical, and agile. Because we ship often, we've happily adopted Continuous Delivery and Test-Driven Design. We develop and maintain highly scalable systems that support Wix's tens of millions of users—and the people who visit their websites.

We strive to hire leaders who subscribe to the Agile school of thought (not processes), seeing leadership as a service position rather than a commanding position.

About you

- You spent at least 2 years leading a team of at least 3 developers
- You're passionate, intelligent, opinionated but also humble and respectful of other people's opinions
- You're a leader, able to create a vision for your team and lead the people throughout its execution
- You're willing and able to mentor other engineers
- You've written production grade code and are allergic to ugly and unmaintainable code
- You're familiar with software engineering best practices (testing, code reviews, pair-programming, immutability, etc.) and are aware of bad practices and anti-patterns
- You have developed in Scala, Java or other JVM-based languages

It would be nice if you...

- Have developed, designed and maintained highly available and large scale production system
- Are skilled in continuous integration, continuous delivery and TDD

- Have experience in other languages such as Javascript, Python, Ruby, etc
- Have an excellent understanding of database systems, relational and otherwise, including sharding for big data applications
